EDUCATION

Manipal University

Master of Computer Applications

Manipal, Jaipur

Sept 2026 – 2028

Siliguri College

Bachelor of Science in Computer Science

Siliguri, West Bengal

Jul 2021 – Nov 2024

PROJECTS

Custom Startpage Dashboard | *React, Figma, MongoDB*

July 2026 – Sept 2026

- Built a customizable React-based startpage with persistent user preferences using LocalStorage, featuring a dynamic header with current time and temperature refreshed every 5 minutes
- Designed a responsive, component-driven UI in Figma and implemented reusable components including a MediaWiki-style search form, reset controls, Google search integration, and system theme support across viewports
- Implemented SEO metadata and Open Graph tags for search-engine discoverability, descriptive page previews, and rich social sharing
- Added self-hosted localized fonts to prevent FOUT/FOUC and provide consistent typography without external font dependencies
- Used GitHub Copilot for code refactoring and development assistance while maintaining a clean, maintainable component architecture

Music Status API | *Node, Express, Vercel*

Nov 2025 – Feb 2025

- Built a RESTful API with Express.js, deployed on Vercel, exposing real-time music listening status for reuse across other personal projects
- Designed /api/info and /api/recent endpoints returning profile/user info and recently played tracks, following REST conventions with resource-based routing and consistent JSON responses
- Implemented request rate limiting with express-rate-limit to prevent abuse and ensure fair, stable API usage for downstream consumers
- Handled error states, input validation, and appropriate HTTP status codes for a production-ready public endpoint

Weather Prediction App | *Next.js, React, TypeScript, Tailwind CSS*

July 2025 – Sept 2025

- Built a full-stack weather forecasting application using Next.js (App Router), React, and TypeScript, integrating the Open-Meteo API for current and forecast weather data
- Developed a pixel-perfect, responsive UI with Tailwind CSS v4, shadcn/ui, and Base UI primitives, using reusable and accessible React components across desktop, tablet, and mobile
- Implemented theme switching, state management, loading/error states, and micro-interactions using next-themes and Motion for a polished user experience
- Used Claude for UI layout development and production code refactoring, reviewing and adapting AI-generated implementations for functionality, design, and code quality
- Maintained code quality with ESLint and Prettier and deployed the production application on Vercel with continuous deployment from the main branch

TECHNICAL SKILLS

Languages: C/C++, HTML/CSS, Javascript, Typescript, SQL (SQLite, MySQL), NoSQL (MongoDB),

Frameworks: React, Node.js, Express, Nextjs, Astro

Developer Tools: Git, GitHub Actions, , Google Cloud Platform, Docker, PageSpeed Insights

Libraries: TailwindCSS, Threejs

AI Tools : Claude Code, GitHub Copilot

LANGUAGES

English: Advanced

Hindi: Proficient
